

1. Kitchen Display Readability

Please increase the readability of the kitchen order cards. The item names, quantities, table numbers, timers, and special notes should be bigger and easier to read from a distance.

Suggested improvements:

- Make item names and quantities more prominent.
- Make table numbers larger.
- Make special notes like “medium-thick cut” more visible.
- Make the timer larger, especially for overdue orders.
- Use stronger visual separation between different order cards.

2. Simplified Kitchen Workflow

Since Woosoo is a fast-serving dispatch station, the kitchen workflow should stay simple. Instead of using too many statuses like Confirmed, Preparing, Ready, and Served, we can just use:

Preparing
Served

The goal is to make the kitchen display fast and easy to operate during peak hours.

Suggested flow:

- New orders enter the kitchen queue.
- Staff taps “Preparing” when the order is being handled.
- Staff checks items one by one as they are prepared or dispatched.
- Once all items are completed, staff taps “Served.”

For the staff side, the main actions should only be:

- Preparing
- Served

We can still keep “Pending” or “New Order” as a system label, but it should not make the workflow feel complicated.

3. Button Label Improvements

Please simplify the kitchen buttons based on the order status.

Suggested button behavior:

- New order: “Start Preparing” or “Preparing”
- Active order: “Mark as Served”

Avoid using “Confirm · Start” because it may feel unclear. Confirming and starting can mean different things, and this may confuse staff during busy hours.

4. Overdue Order Highlight

For overdue orders, please make them more visually urgent. The red border is good, but it can be stronger.

Suggested improvements:

- Thicker red side border
- Larger red timer
- Stronger “Overdue” label
- Optional subtle alert sound or blinking indicator
- Prioritize overdue orders visually in the queue

The overdue orders should immediately catch the attention of the kitchen team.

5. Item-Level Status Clarity

The checkboxes are useful, but please make their meaning clearer.

Suggested item flow:

- Empty checkbox = not yet prepared
- Checked item = prepared or dispatched
- Strikethrough item = completed
- Voided item = clearly marked as voided

Once all items are checked, the full order can be marked as “Served.”

6. Dashboard Improvements

The dashboard looks professional, but we can make it more useful for management by adding stronger business insights.

Suggested additions:

- Average order value
- Best-selling package
- Peak hour indicator
- Sales comparison vs yesterday or last week
- Orders completed today
- Issues requiring attention, such as offline tablets, low-battery devices, or print failures

7. Orders Page Improvements

Please make sure the admin order statuses match the simplified kitchen workflow.

Suggested order statuses:

- Pending / New
- Preparing
- Served

- Voided
- Cancelled

This keeps the system simple while still allowing admin to monitor what is happening.

Also, it would be helpful to add clearer filters by:

- Table number
- Order status
- Package
- Time
- Voided or cancelled orders

8. Device Page Improvements

The device monitoring page is very useful. Please make warning and offline tablets more noticeable and automatically prioritize them at the top.

Suggested improvements:

- Offline tablets should appear first.
- Low-battery tablets should have a stronger warning.
- Add “last synced” or “offline for ____ minutes.”
- Show if the app version is outdated.
- Keep battery, IP address, app version, and restart options because these are useful.

9. Sidebar and Contrast

The admin sidebar looks good, but some inactive menu items and section labels are a little too dim. Please slightly increase the contrast so it is easier to read, especially during long use.

10. Branch and Sync Status

Since this may be used for multiple branches in the future, please make the current branch and sync status clearer.

Suggested display:

- Current Branch: HQ Branch
- Status: Online
- Last Sync: 8:12 PM

This will help avoid confusion when managing multiple locations.

11. General Direction

Please keep the premium dark Woosoo look, but prioritize operational clarity. The system should look good, but it should also be fast, readable, and easy to use during busy restaurant hours.

Main priority:

Make kitchen text bigger, make overdue orders more urgent, simplify the workflow to Preparing and Served, make buttons clearer, and make device warnings easier to spot.
